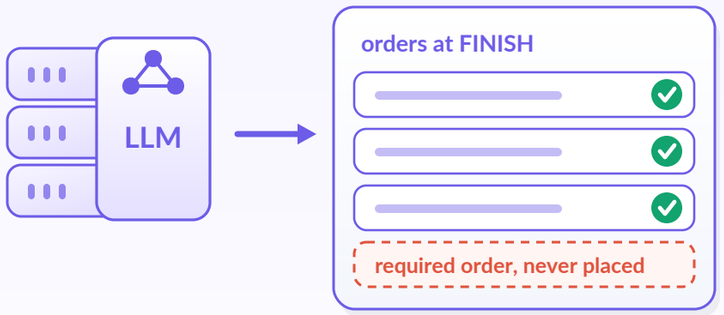
The agent misses orders

that it already knows



75% of required orders proposed in a run

91% proposed in one of five runs

84% of the missed ones named from the task

Two causes, on two agents

Plans late · and anchors on its own orders

A checker reads its work

a System One model, or the LLM itself

0.40 AUROC for missed orders: below chance

6 System One models (0.37–0.43), Qwen 0.46

Anchored by the agent's orders, not its notes

Inherits · the blind spot

Fresh eyes

a System One model reads only the task

Open required-order checkpoints passed

Qwen3.8-27B	38 → 53%	+15
Gemma 4 31B	29 → 58%	+29

Beats a random list · extra orders not harmful

Recovers · what the agent missed
